

Driving Innovation: Insights on HPC/AI/QC/Cloud architectures to support the future of science & engineering

Srikanth Gubbala,
Head of HPC Infrastructure (Global), Applied Materials

Agenda

- ❑ Vision & Convergence
- ❑ Next-Gen Compute for CAE & Chemistry
- ❑ The Cloud Journey – More Than Technology
- ❑ Semiconductor Real-World Impact & Emerging Trends
- ❑ Looking Ahead – Future of Scientific Computing

The Computational Frontier: Transforming Science and Engineering Through Integrated Architectures

The Computational Frontier: Transforming Science and Engineering Through Integrated Architectures

- Rapid advancements in science and engineering demand scalable, intelligent, and flexible computing
- Convergence of HPC, AI, Cloud, and Quantum is a foundational enabler
 - ❑ HPC: Foundation for physics-based modeling, simulation, and design
 - ❑ AI: Accelerating model discovery, defect prediction, and optimization
 - ❑ Cloud: Elasticity, global access, platform unification
 - ❑ Quantum: Disruption in molecular modeling and complex systems
- Focus: CAE, computational chemistry, and semiconductor R&D

The background of the slide features a dark blue gradient with a complex, abstract network diagram. This diagram consists of numerous small, light blue circular nodes connected by thin, white lines, creating a web-like structure that suggests connectivity and data flow. The nodes are distributed across the frame, with some appearing more prominent than others.

Scalable Cloud Architectures for Advanced Engineering Workflows

Scalable Cloud Architectures for Advanced Engineering Workflows

- Use cases: CFD, FEA, Molecular Dynamics, Quantum Chemistry simulations
- Cloud bursting for simulation-intensive workloads (ANSYS, Gaussian, LAMMPS, etc.)
- Accelerated design iterations with AI/ML in the loop
- Secure collaboration across globally distributed teams

Transforming Culture, Finances, and Technology: The Real Cloud Journey

Transforming Culture, Finances, and Technology: The Real Cloud Journey

- **Cultural:** Upskilling, DevOps mindset, agile experimentation
- **Financial:** Shift from CapEx to OpEx, cost transparency, right-sizing
- **Technical:** Automation, CI/CD, resilient architectures
- **The 7 Rs of Migration:** Retire, Retain, Rehost, Replatform, Refactor, Repurchase, Relocate

Accelerating Semiconductor R&D with Intelligent Infrastructure

Accelerating Semiconductor R&D with Intelligent Infrastructure

- AI + HPC in defect modeling, failure analysis, process optimization
- Quantum + Cloud for material simulation and photonics modeling
- Use cases: faster tape-out, reduced design cycles, higher yield
- Metrics: reduced turnaround time, cost savings, global engineering agility

The Future of
Engineering is
Predictive,
Intelligent, and
Scalable

The Future of Engineering is Predictive, Intelligent, and Scalable

- AI-native platforms for design & discovery
- Quantum integration to solve intractable molecular and optimization problems
- Rise of HPC-as-a-Service and cloud democratization
- Final thoughts: Organizations must invest in agility, interoperability, and innovation-ready architecture

Thank you
